

INCREASE YOUR FARM'S PRODUCTION

SOIL HEALTH PARTNERS

VF3 is committed to partnering with farmers to help lower input costs, improve nutrient density, and yields while saving on water costs.

BOKASHI AMENDMENT

Our Bokashi Amendment will help improve soil health quickly and efficiently using Bokashi organic methods.

SOIL REGENERATION

Experience the effects of true soil regeneration at your farm today to help increase your bottom line.

RESULTS DRIVEN INFORMATION

We have been testing our Bokashi Tea by VF3 in Iowa and have already seen great results. Let our team show you how we can help your farm produce at a higher level while aiding to improve soil health.

The Revival: Bokashi Tea by VF3

Faster Yield Increases

Bokashi by VF3 energizes the soil with beneficial microbes that unlock nutrients already present but trapped. Farmers see faster germination, stronger root systems, and higher crop yields within the very first planting cycle. It's not just growth—it's optimized performance of the land.

New Topsoil Building

Unlike chemical fertilizers that strip the soil, Bokashi regenerates it. With each application, farmers build new layers of healthy topsoil—adding an inch or more annually. Over time, fields once depleted by decades of chemicals are restored to fertile, black earth.

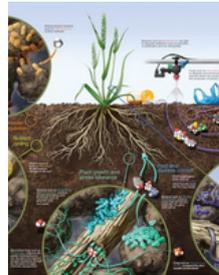

Soil Remediation Solutions

Hemp's natural remediation power binds and removes toxins left behind by synthetic pesticides and herbicides. Bokashi by VF3 when hemp is added accelerates this process, detoxifying the land and making it safe for crops, livestock, and future generations.

Stronger Microbial Life

Healthy soil is living soil. Bokashi infuses fields with diverse microbes that form a resilient ecosystem underground. This microbial life continues working season after season. The microbes produce 3% organic matter annually.

Today, hemp is returning—but smarter. Cab Baber pioneered Wet Hemp Bokashi, an inoculant made with hemp's own powerful biology. Instead of waiting for a season of hemp growth to rotate into soil, farmers can apply Bokashi tea directly during planting. The benefits are immediate and noticeable as detailed above. Starting with VF3 Wet Hemp Bokashi Tea gives farmers instant results while laying the groundwork for wider hemp adoption. As farmers integrate hemp as a rotational crop, VF3 gains the raw material to keep producing Bokashi and fuel the next phase.

Bokashi Tea by VF3 Testing in Iowa Seeing Impressive Results

VF3 is currently seeking authentic test results from Iowa farms and is actively conducting trials in the state. The product has already exhibited impressive outcomes in the field, with positive results on the rise. Cab Baber, VF3's Chief Bokashi Engineer and veterans Mike and Randy Hasstedt are working on a property near Waterloo, IA, to validate our system to help improve the health of their soil. Notably, the team observed results within just 24 hours, and the process is rapidly rejuvenating the soil at an exceptional rate.

The images to the right show the day of application, 24 hours after application and 3 days after application.
